

## Number Line Strategy - Finding the difference

- Draw an empty number line.

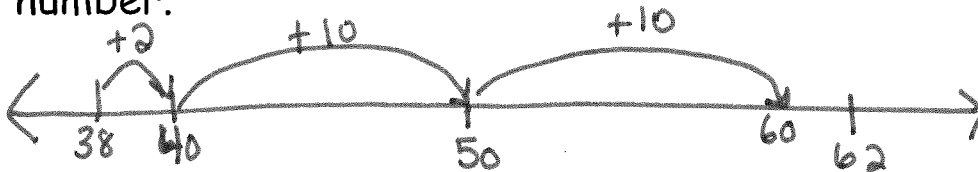

- Put the lower number on the left, and the higher number on the right.

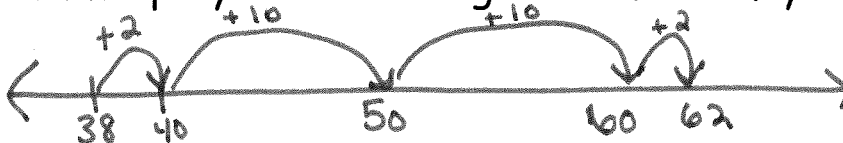

- Start at the lower number. Count up to the next number ending in 0.

- Count up by 10s until you are close to the higher number.

- Count up by 1s to the higher number if you need to.

- Add up how many "hops" you made between the lower and higher number.

$$10 + 10 + 2 + 2 = 24$$
